NAVIGATING AML TREATMENT DECISIONS
The Pro-Active AML Patient Toolkit

- Have you been diagnosed with acute myeloid leukemia (AML)?
- Do you understand your treatment options?
- Have you had essential testing for your AML?
- Have you discussed your treatment goals with your doctor?
- Have you discussed your treatment options with your doctor?

It’s important you receive an accurate diagnosis and understand your AML.

Learn more about your potential treatment options, which may include:
- Chemotherapy
- Targeted therapy
- Stem cell transplant
- Immunotherapy
- Clinical trials, which may provide access to treatments that are not yet approved.

Before you start any treatment, ask your doctor if you have had relevant AML testing, including genetic testing. Discuss what the results could mean for you. It may inform your prognosis and which treatment may be best for your AML.

Understanding the goals of your AML treatment and how it may affect your lifestyle is essential. Knowing your risk, as well as factoring in your overall health, will help guide the discussion with your doctor.

Factors that may affect your treatment decision and goals, include your age, overall health and existing conditions. Once you understand the treatments that are available to you, talk to your doctor about the risks and benefits of each option.

- Learn more about AML treatment decisions.
- Ask about testing and whether you need to be retested over time.
- Discuss clinical trials with your physician.
- If you don’t feel supported or an active member of your team, then it is always best to seek another opinion if you are able.
